## **1. Introduction**

The distinct character of Greenhouse Vegetable Production deserves individual consideration. Whether for production, research, or education, Rough Brothers will provide a custom solution to your production style. Hydroponics or soil, our in-house Vegetable Production Specialist awaits the opportunity to share his years of study, experience, and wisdom on the subject.

## **2. Photo Gallery**

## **3. Hanging Trough Systems**

Hanging Trough Systems, commonly used for vine crops facilitate crop work, keeping the plants from contact with the floor of the greenhouse and allow the introduction of outside air and CO<sub>2</sub> under the plants.

## **4. Flood Floors**

Growing on heated concrete flood floors is gaining popularity; especially in areas where control of run-off irrigation water from the greenhouse is an issue.
