1. Introduction

Systems Integration is the cornerstone of Rough Brothers' design philosophy. A complex network of structures, equipment, and unpredictable natural events make systems integration a fundamental element in greenhouse design. [MORE >>](#)

3. Additional Information

Systems integration ensures the establishment of effective and efficient relationships among all components of the greenhouse operation. Attentive equipment selection paired with systematic environmental controls, provides simple solution to complex scenarios.

Systems Integration - Increasing efficiency, productivity and profitability with equipment and systems that work together.
