1. Introduction

Rough Brothers began as a greenhouse maintenance and service company in 1932. While our company has grown over the years to include Conservatory and Greenhouse Design, Manufacturing, and Construction, we have always realized and emphasized the importance of regular upkeep and maintenance in maximizing any facility's reliability and service life. Well-maintained and regularly serviced greenhouses and conservatories not only present a beautiful and peaceful atmosphere, they also promote an image of dependability. [MORE >>](#)

3. Why Rough Brothers Maintenance?

At many major institutions, physical plant maintenance departments are responsible for maintaining the plant growth facilities. While these groups are experienced in typical building systems, they often do not have the skills or resources to properly maintain a plant growth facility. Greenhouses and all of their working parts require a knowledge base vastly different from that of other buildings on campus. That is where we come in. Rough Brothers has the knowledge and experience to handle your facility's maintenance needs.

Turning to our team of experts to maintain your greenhouse or conservatory can benefit you in many ways. Regularly scheduled Rough Brothers' maintenance can reduce operating costs and extend facility service life. You will be assured of timely service from experienced greenhouse maintenance crews. In addition, the equipment required to operate your greenhouse or conservatory is specialized, and our team of experts is skilled in maintaining this equipment as well as the overall structure and glazing system. You no longer need to be concerned with system shut down due to neglect and lack of preventative maintenance. You can feel confident that the plant life in your facility will thrive.

We make every effort to achieve operational excellence and provide top-of-the-line customer service. Our success is measured by the success and satisfaction of our customers.

4. Additional Benefits

- Reduced Costs

Maintenance

- Single-Source Responsibility
- Trouble Shooting
- Identification Of Safety Concerns
- Reduced Liability
- Experienced Greenhouse Crews
- Preventative Maintenance
- Parts Compatibility
- Extended Service Life
- Quick Response
